Carrier Concentrate improves the distribution of pesticides by carrying the pesticide spray mixture to the undersides of foliage and penetrating dense foliage to the plant stems. A uniform particle size also improves the effectiveness of the pesticide. The lighter than air particles produced by CARRIER CONCENTRATE envelopes the whole interior of the greenhouse to contact pests that hide away from plants.

Thermal Fog for use with CARRIER CONCENTRATE.

Dyna-Fog	2605	Superhawk	iGEBA	EVO 35
Dyna-Fog	2610	Golden Eagle	iGEBA	TF 34

Pesticides: Insecticides, Fungicides, Miticides, and tank mix combinations.

Type Pesticides: Wettable Powder (WP), Emulsifiable Concentrate (EC), Flowable and Soluble.

DIRECTIONS FOR USE

SMOKE GENERATORS:

Mix 1 quart CARRIER CONCENTRATE with 4 quarts water and mix well. This carrier and water solution can be stored in a closed container for future use. Mixture for 1 acre: 10 quarts (2.5 gallons) of carrier water solution with pesticides label recommendation amount for pesticide for 1 acre. This mixture will effectively treat 1 acre, approx. 44,000sq. ft. of greenhouse. Calculate your area and mix amount of pesticide to treat your square feet of plant material. For specific instructions for your operation, call (852) 28719021-2

COLD MISTER / ULV: Add 10% CARRIER CONCENTRATE to pesticide/ water mix.

IMPORTANT INFORMATION

MIX pesticide solutions in quantities that you will use per application. Carrier and water solutions can be pre-mixed and stored in closed containers. Carrier water and pesticide mixtures must be used up and not stored.

APPLICATION PROCEDURE

Important: Move the Dyna-Fog® applicator continuously while fogging (never fog continuously in one spot.). Never fog directly at plants. Do not come within 16 feet of plants with applicator nozzle. The first 16 feet of fog from nozzle is highly concentrated. Adjust machine for a dry fog. Fog when foliage is dry.

Start at the farthest end of the greenhouse and work your way toward the exit. Judge your rate of application by looking at the formulation tank. When the tank is 1/4 lower from original volume, you should have covered 1/4 of your area; 1/2 lower – 1/2 the area. Move the machine accordingly towards the exit directing the fog towards ceiling and/or under benches. Close house for one and half hours. Ventilate before reentering.

Notice: Seller makes no warranty other than specified on this label. The buyer agrees that the seller shall not be responsible or liable for injury to crop, soil, person or property arising from careless or improper use or handling of the product. Please use in accordance with label directions.
